## Introducing Fotoba Automated Cutters

Distributed in Australia by

Do you realise that the bottle neck is in the finishing and cutting, not the printing?

FOTOPA (Italy) produces automatic cutters of the highest construction quality. Available in a range of sizes, there is a model to suit your finishing needs.

The larger ROLLCUT models are designed to trim prints straight off the roll. Trimming both X & Y directions simultaneously.

The smaller DIGITRIM models allow hand fed sheets to be trimmed automatically via sensors that detect the alignment of the feed, so no squaring up required.

These machines give your business the ability to trim rolls full of prints in as little as a few minutes! Compare that to trimming by hand, and you will find that you are saving many hours of manual labour. These machines will not only speed up your production, but they will also save you money.

All models allow a number of trim settings for bleed and offset which can be recorded as presets to make the once menial task of trimming even easier. (Appropriate registration marks are required)

To arrange a demonstration or quote with one of our team, dont hesitate to give us a call on (02) 8876 6666.
